

FUND OBJECTIVE

The main objective of the Fund is to achieve consistent income streams through investment in select portfolio of securities and investments specified in the Trust Deed. The Fund's assets are invested in Federal Government bonds, Sub-national bonds, corporate bonds and high quality money market securities. The Fund is not affected by the fluctuations in the equity markets. However, opportunities for capital appreciation are dependent on changes in interest rate.

MARKET REVIEW, OUTLOOK AND STRATEGY

At the June bond auction, the Debt Management Office (DMO) offered to sell ₦150.0bn worth of bonds across the 2027s, 2035s and 2050s (replacing the 2049s). The DMO's move at introducing a new bond was aimed at creating artificial scarcity for bonds, thereby driving yields lower in the secondary market, with subsequent downward impact on marginal rate at the bond auction. Truly, the DMO achieved its aim as marginal rates at the bond auction closed lower.

Across the 2027 and 2035 offerings, marginal rates fell 36bps and 50bps to 12.74% and 13.5%, respectively. Marginal rate on the 2050 offering closed at 13.7%, 50bps lower than the marginal rate on the 2049 offering at the May bond auction. Notably, the DMO took advantage of strong investor interest (₦417.5bn subscription vs ₦150.0bn offering) to oversell at the auction, selling an excess of ₦175.8bn worth of bonds.

The bearish sentiments that have trailed the bonds market in 2021 weakened in June as sovereign debt managers' financial repressive tactics paid off. Accordingly, average sovereign bond yield fell month on month (m/m) for the first time in six months, down 66bps m/m to 11.8% in June from 12.5% at the end of May. Similarly, at the corporate bond market, average bond yield fell 11bps m/m to 13.5% in June from 13.6% at the end of May.

Looking ahead, in July, sovereign bond maturities and coupon inflows totalling ₦815.0bn is expected to hit the bonds market. Investors expecting this huge liquidity are expected to reinvest in new bonds, creating strong demand for bonds and consequently driving yields lower.

Management Fee	1.5%
Total Expense Ratio*	1.6%
Benchmark	3-Yr FGN Bond Yield
Risk Profile	Medium
Investment Style	Income Oriented

PERFORMANCE REVIEW

The United Capital Fixed Income Fund returned 0.62% for the month of June bringing the Year to Date ("YTD") annualised return to 6.75%, relative to the annualized return of 11.23% posted by the benchmark for the same period.

The Treasury bonds market closed the month on a bullish note, as yields adjusted to the lower stop rates at the FGN bond auction. Across the curve, average yield decrease due to investors demane for short, mid and long tenored bonds. Overall, we expect yields to continue its downward trend on the average over the short term.

The portfolio remains invested in FGN Bonds, money market instruments and sub-sovereign bonds with significantly higher yields. We will maintain current allocation to enhance yield income for the Fund.

Maturity Profile of Assets

<1 yr	10.5%
1-3yr	6.4%
3-5yr	11.0%
5-10yr	72.1%
